Customized Solutions

Automation & Integration

After 2 years without Control, we are delighted that we will be seeing each other again in Stuttgart this year. All the more so as we will be presenting you with exciting new developments in relation to two subjects that will shape our working world in the future:

- **Automation:** Here we'll be demonstrating smart solutions for automated measurement processes in various industries, already being used successfully today.
- **Mobile world:** With our HoloLens2 application, we bring the mobile world to life. The new SpatialAnalyzer Remote App, which is now available for both iOS and Android devices, enables user-friendly operation of the software SpatialAnalyzer from the comfort of your mobile device.

May 3 - 6 | Stuttgart  
Hall 5 | Booth 503

### Come on by - it's worth it!

Together with our partners NRK, Brunson and GSI, who will bring you up to date with the latest software news of SpatialAnalyzer, portable metrology devices + accessories and photogrammetry, we will be offering you state-of-the-art metrology.

We would have loved to invite you to our booth party as in previous years, but unfortunately booth parties are not allowed this year. Having said this, we will be keeping a few drinks cold - which we would be delighted to enjoy together with you at the end of the trade fair days, completely relaxed at our bar...

### We look forward to seeing you!

#### GUEST TICKET

We would be pleased to send a free Control day ticket for your visit. To get yours, simply click on the button and register. Please use Google Chrome browser.
